

Sybestor

**Battery Tester & Analyzer for
APC Schneider Electric's
Symmetra PX and VT
SYBTU-PLP batteries.**

Finally, an easy way to:

⚡ Quickly Analyze Battery Trays
The Sybestor instantly gives you Voltage, Temperature and Resistor class values in a quick grab & go format.

🔋 Load Test Battery Trays
The Sybestor provides a real load/drain test on the batteries and records the performance on the companion app.

🔧 Perform Maintenance Effectively
Until now, there was no way to effectively monitor the health of the batteries trays over time. The Sybestor APP can store the performance load test values for comparison

⚙️ Troubleshoot Faster
Most problems with UPS systems are the batteries. Quickly being able to triage the health of the batteries means you can find the problem faster.

Easy to Operate

Just remove the battery tray and plug in the Sybestor.

The Sybestor mates with the rear of the battery. No Leads!

Sybestor LIVE! App offers

The Sybestor LIVE! App comes pre-installed in a lightweight phone and uses Bluetooth technology to connect to the Sybestor. The App features a Mimic screen for quick reference of battery status. However, the real power comes from the data-logging feature. After each test the battery's rest, under load and recovery voltages are logged for easy downloading.

MODELS

Basic Model: SYB3 - Includes testing module only with carrying case

Pro Model: SYB3KIT - Same as the basic, but adds phone with Sybestor LIVE! App, training session, insurance, and free APP upgrades for 1 year.

Rental: SYBP3RENTAL - 30 day Pro rental with training & technical support

The Sybester makes you money

Increase Revenue w/Sybester

Pays for itself on the 1st visit

Actionable Data

The Sybester yields detailed data about the health of the batteries, which you and your customer can use to plan battery replacements as needed.

Simple Service to Perform

Most PX systems can be tested with the Sybester in under an hour. Further the Sybester is intuitive, meaning techs can start generating revenue the first day they get it.

Reoccurring Revenue

Until now, there was no way to effectively monitor the health of the batteries trays over time. Sybester the batteries when they are new, and every year after that.

Differentiate your Service

Buy your Sybester today and become part of the early adaptors of this technology.

How it works

- 1) Offer your PX customers a detailed battery load test, similar to cell resistance testing that might be done for other large UPSes
- 2) During your routine PX Preventive Maintenance visit spend an extra hour and test each PX battery with the Sybester
- 3) Download the data and generate a graphical report that shows the health of each battery tray.

The Sybester yields detailed data to your customer about the health of the batteries, which you and your customer can use to plan battery replacements as needed.
