

# Syntinel

**USER MANUAL**  
for Release 2  
02/2024

**The Tool to Monitor  
& Troubleshoot  
your Symmetra LX**

## Introduction

Thank you for buying the Syntinel LX Monitoring Tool Kit.

Unpack the box and make sure you have all the parts.

- 1 - Syntinel LX Module (transmitter)  
A - power cable / cat5 plug  
B - data cable / RS232 type
- 2 - Phone charger and USB cable
- 3 - Phone in leather snap case
- 4 - Moto G Pure Phone/Tablet

[INSIDE CASE:]

Syntinel LX Info  
QuickStart Cards (hardware & software)  
Syntinel Service Plan (if purchased)  
User Manual

# QuickStart

## Testing your SYBT5 Batteries

### 1) OPEN the APP

Follow the quick start instruction to install and connect the Syntinel to your ups if needed.

Click on the Battery Table button at the bottom on main app screen.

### 2) LOOK at the Table

Batt	Item	SHunt	Drng	Mkts	Cl	HW	MA
err1	COI	Cur	Reg	Itara	Flecc	Date	
1	1	0.000	30	28	0.000		
1	1	0.000	30	28	0.000		
0	0	0	0	0	0		
0	0	0	0	0	0		
0	0	0	0	0	0		
0	0	0	0	0	0		
0	0	0	0	0	0		
0	0	0	0	0	0		
0	0	0	0	0	0		

Give the app time to load each SYBT5 battery's module data.

APC genuine batteries & rebuilt SYBT5s with new Syntelligence will fully populate with Age & Cal factors showing the health.

If you don't have that data you may have unprotected batteries.

Unlike other battery trays, you can't just replace the internal batteries in a SYBT5 and expect it to work like a new one.

This is because inside each SYBT5 is a board that tracks the health and charge status throughout the tray's life.

This Syntelligence, as we call it, is only found in genuine APC brand SYBT5s and special rebuilt ones showing the logo

## Need Syntelligence?

Good news! You can now buy SYBT5 boards reprogrammed with fresh new Syntelligence.

Ask your UPS service provider for new boards to use with your new batteries inside an old shell.

### 3) READ the Table

The table shows upto 16 SYBT5s by their address on each intell module. (Notice how the intelligence modules share the battery data duties)

Each working battery should show "Present & On". SYBT5s that test bad will show Off.

B #	Pres ent?	Is On?	Shunt Curren
0	1	1	0.056
1	1	1	0.000
2	1	1	0.072
3	1	1	0.138

The Shunt current shows the charge/discharge behavior of a SYBT5. If the unit has been running awhile, they may be fully charged with little or no current.

This is normal. During discharge or recharge these values will change. In an ideal setting ALL the SYBT5s will move together.

Cal Factor is the overall health of the SYBT5. In practice the more discharges, the lower the score & the weaker the battery. When Cal Factor goes below 0.25, the SYBT5 is flagged bad.

Mfr Data and Age are read from the chip. In theory most SYBT5s last no more than 5 years.

ax	Cal Factor	Mfr Date	GL ?
9	92	03/02/18	
0	74	02/04/22	GL
0	100	01/15/19	
2	100	05/12/12	

### 4) RUN the Datalogger

While the data can give you key information, only a real battery test can tell you how the SYBT5s are doing.

Return to the Main Screen and select Line Graph.

Click the Run button to start the datalogger.

Notice how each SYBT5 is plotted with amps and voltage.

## QuickStart

Testing your SYBT5 Batteries

## Testing your SYBT5 Batteries

### 5) RUN a Self Test

Now on your LXs screen, Goto Control and run a Self Test.

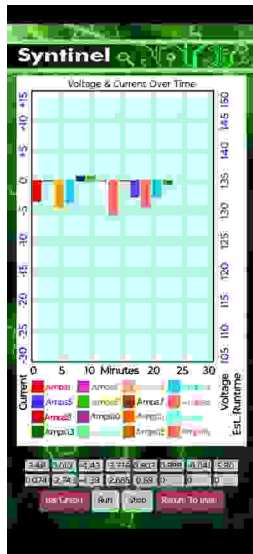

Watch the chart as the batteries begin to discharge without AC power.

This is a visual display of the health of your batteries. Good batteries won't drop as much as weaker batteries.

### 6) SEND us the Results

Stop the test and Screen Capture the Chart by dragging 3 fingers down the Moto G Screen.

Share it with your Symmetra partner or [info@symmtools.com](mailto:info@symmtools.com)

The Syntinel LX system was invented by Robert Furmanak, Senior Engineer at GreenLightUPS, Inc.

At its core, it's a data collection device to read and then transmit Symmetra LX data to a computer.

The innovation of the Syntinel LX system is how it takes this data and translates it into actionable visuals.

It a passive but powerful tool to troubleshoot and learn about the Symmetra LX

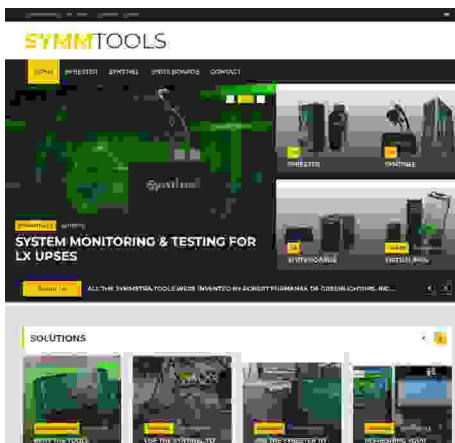

## More innovations

Follow Robert Furmanak's innovations on his LinkedIn page and learn more about UPS reverse engineering, troubleshooting and more.

# Online Resources

Feel free to view the online resource SYMMtools.com for more information about the Syntinel including videos, FAQs, and help info

# QuickTips

The Syntinel can plug into either SYMIM5 intelligence module.

Most Syntinel Tablet/Phone bundles include a magnetic phone protector which can attach to the Symmetra frame.

SYBT5s generally cannot be re-used when the batteries expire. We recommend using only genuine new APC SYBT5s, new SYBT5+ or use refurbished SYBT5s with Syntelligence.

Talk to your UPS provider if you need new Syntelligence replacement boards.

Most systems ship with a locked cell phone. However you can do screen captures and share using the wifi feature on the phone.
